Jules Ruby Photography – Event Photographer

Calgary, Alberta, Canada

August 2016 – Present

Kinjo Sushi & Grill – Supervisor/Server/'Pockyman'

Calgary, Alberta, Canada

August 2015 – January 2020

Shell – Chemical Technologist

Calgary, Alberta, Canada

August 2010 – September 2014

PROJECTS

- **Personal Portfolio Website**

Technologies: HTML5, CSS3, JavaScript, Netlify, Git, SVG

Summary: Design and create a personal website to showcase some of my projects and portfolio. As well as have some fun experimenting with CSS3 to infuse it with modern retro/synthwave appearance. Implemented client-side form validation via JavaScript.

Repo: <https://github.com/JulesRuby/jr-muri-website-simple>

- **Business Website Sky Electric**

Technologies: HTML5, CSS3, JavaScript, Netlify, Git

Summary: Developed a business website for an electrical contracting business, using responsive design practices.

Live: <https://www.skyelectric.ca/>

Repo: <https://github.com/JulesRuby/skyelectric>

- **Pokemon API**

Technologies: HTML5, CSS3, JavaScript, REST API, Git

Summary: Create client-facing web page to fetch data from an open-source API, and use the returned values to dynamically generate and inject HTML elements onto the page. Elements may be clicked on to navigate to a new page, displaying detailed information queried from the associated API endpoints.

Repo: https://github.com/JulesRuby/Pokedex_PokeAPI

- **Jekyll Music Blog Mockup**

Technologies: Ruby, Jekyll, Liquid, HTML5, CSS3, Netlify, Git

Summary: Create a mockup of a music blog format, utilizing Jekyll Kramdown, and Liquid markdown syntax to template out the elements.

Live: <https://jekyll-music-blog-mock.netlify.app>

Repo: <https://github.com/JulesRuby/jekyll-assignment>

- **Custom Gallery Website**

Technologies: HTML5, CSS3, JavaScript, Node.js, Express, EJS, MongoDB, Heroku, Git

Summary: Develop and deploy a static website using EJS to template it, so that it can easily generate new content as it is added to the database. This web site's primary feature is the custom image gallery, which showcases the power of the templating engine to draw from stored data.
